| Section | A: Q.1 – Q.10 Carry ONE mark each.  |
|---------|---|
| Q.1     | Which one of the following is a non-parametric test?  |
| (A      | ) $\chi^2$ - test   |
| (E      | ) <i>t</i> - test   |
| (0      | ) $F$ - test  |
| (E      | ) $z$ - test  |
|         |   |
| Q.2     | Let $x$ and $y$ be two consumption bundles, assumed to be non-negative and perfectly divisible. Further, the assumptions of completeness, transitivity, reflexivity, non-satiation, continuity, and strict convexity are satisfied. Then, which of the following statements is NOT CORRECT? |
| (A      | ) Either $x \gtrsim y$ , or $y \gtrsim x$ , or both   |
| (E      | ) $y \succ x$ if y contains more of at least one good and no less of any other  |
| (0      | ) $x$ is not indifferent to itself  |
| (E      | ) For $x$ (or $y$ ), its better set is strictly convex  |
|         |   |
|         |   |

| Q.3 | Consider a production function of the form:                                     |  |  |  |
|-----|---|--|--|--|
|     | $Y = a \log L + (1 - a) \log K$ , $a \in (0, 1)$ , $a \neq 0.5$                 |  |  |  |
|     | where, $Y$ is output, $L$ is labour, and $K$ is capital.                        |  |  |  |
|     | Then, the absolute value of elasticity of substitution is                       |  |  |  |
| (A) | 1   |  |  |  |
| (B) | a   |  |  |  |
| (C) | (1-a)   |  |  |  |
| (D) | x   |  |  |  |
|     |   |  |  |  |
| Q.4 | Consider a closed economy with consumption function $C = 2 + 0.5Y$ , where      |  |  |  |
|     | Y is income. The government expenditure is 3 and investment function is         |  |  |  |
|     | I = 4 - 0.5r, where r is interest rate. Then, the slope of the IS curve will be |  |  |  |
| (A) | 1   |  |  |  |
| (B) | -0.5  |  |  |  |
| (C) | 1.5   |  |  |  |
| (D) | -1  |  |  |  |
|     |   |  |  |  |

| Q.5 | Which of the following was announced in the Union Budget 2023-24 to enhance the skills of lakhs of youth in the next 3 years?                           |  |  |  |  |  |
|-----|---|--|--|--|--|--|
| (A) | Pradhan Mantri Kaushal Vikas Yojana (PMKVY) 1.0   |  |  |  |  |  |
| (B) | Pradhan Mantri Kaushal Vikas Yojana (PMKVY) 2.0   |  |  |  |  |  |
| (C) | Pradhan Mantri Kaushal Vikas Yojana (PMKVY) 3.0   |  |  |  |  |  |
| (D) | Pradhan Mantri Kaushal Vikas Yojana (PMKVY) 4.0   |  |  |  |  |  |
|     |   |  |  |  |  |  |
| Q.6 | Suppose a random variable X follows an exponential distribution with mean 50.<br>Then, the value of the conditional probability $P(X > 70   X > 60)$ is |  |  |  |  |  |
| (A) | $e^{-\frac{7}{5}}$  |  |  |  |  |  |
| (B) | $e^{-\frac{6}{5}}$  |  |  |  |  |  |
| (C) | $e^{-\frac{1}{5}}$  |  |  |  |  |  |
| (D) | $e^{-\frac{7}{6}}$  |  |  |  |  |  |
|     |   |  |  |  |  |  |
|     |   |  |  |  |  |  |

| Q.7 | Which of the following measures was NOT initiated by the Government of India as a part of economic reforms in 1991?                              |  |  |  |  |
|-----|--|--|--|--|--|
| (A) | Announcement of new industrial policy  |  |  |  |  |
| (B) | Full convertibility of rupee on the capital account  |  |  |  |  |
| (C  | Removal of Quantitative Restrictions   |  |  |  |  |
| (D) | ) Guidelines for investment by Foreign Institutional Investors (FIIs) in the capital market  |  |  |  |  |
|     |  |  |  |  |  |
| Q.8 | Suppose nominal GDP equals 1,000 units and money supply equals 250 units.<br>Based on the quantity theory of money, the velocity of money equals |  |  |  |  |
| (A) | 40   |  |  |  |  |
| (B) | 4  |  |  |  |  |
| (C  | 2,50,000   |  |  |  |  |
| (D) | 500  |  |  |  |  |
|     |  |  |  |  |  |
|     |  |  |  |  |  |
|     |  |  |  |  |  |

| Q.9   | Let $S_1 = \{(x, y) \in R^2 : x + y \ge 1, x + y \le 2, y \ge x^2, x, y \ge 0\}$ and<br>$S_2 = \{(x, y) \in R^2 : x + y \ge 1, x + y \le 2, y \le x^2, x, y \ge 0\}.$<br>Then, which of the following is CORRECT ? |
|-------|--|
| (A)   | Both $S_1$ and $S_2$ are convex sets   |
| (B)   | $S_1$ is a convex set but $S_2$ is not a convex set  |
| (C)   | $S_2$ is a convex set but $S_1$ is not a convex set  |
| (D)   | Neither $S_1$ nor $S_2$ are convex sets  |
|       |  |
| Q. 10 | $\lim_{x \to \infty} \left( 1 + \frac{1}{x} \right)^x$ is equal to   |
| (A)   | е  |
| (B)   | 1/e  |
| (C)   | 1  |
| (D)   | 8  |
|       |  |
|       |  |
|       |  |

| Section A | a: Q.11 – Q.30 Carry TWO marks each.  |
|-----------|---|
| Q.11      | Two distinct integers are chosen randomly from 5 consecutive integers. If the random variable $X$ represents the absolute difference between them, then the mean and variance of $X$ are, respectively, |
| (A)       | 1 and $\frac{3}{2}$   |
| (B)       | 2 and 5   |
| (C)       | 1 and 3   |
| (D)       | 2 and 1   |
| Q.12      | Consider two independent random variables: $X \sim N(5, 4)$ and $Y \sim N(3, 2)$ .<br>If $(2X + 3Y) \sim N(\mu, \sigma^2)$ , then the values of mean $(\mu)$ and variance $(\sigma^2)$ are              |
| (A)       | $\mu = 19 \text{ and } \sigma^2 = 34$   |
| (B)       | $\mu = 8 \text{ and } \sigma^2 = 14$  |
| (C)       | $\mu = 19$ and $\sigma^2 = 14$  |
| (D)       | $\mu = 8 \text{ and } \sigma^2 = 34$  |
|           |   |

|                | The optimal value of the linear programming problem |
|----------------|---|
| Q. 13          | Maximise $Z = 2x + 3y$                              |
|                | subject to  |
|                | $5x + 4y \le 20,$                                   |
|                | $3x + 5y \le 15,$                                   |
|                | $2x + y \le 4,$<br>$x, y \ge 0,$                    |
|                |   |
|                | is  |
| (A)            | 4   |
|                |   |
| (B)            | 64  |
|                | $\frac{31}{7}$                                      |
|                |   |
| $(\mathbf{C})$ | 9   |
| (C)            | 9   |
|                |   |
| (D)            | $\frac{72}{-}$                                      |
|                | 7   |
|                |   |

| Q.14 | The solution of the differential equation                                |  |  |  |  |
|------|--|--|--|--|--|
|      | $xy  dx - (x^2 + y^2)  dy = 0, \ y(0) = 1$                               |  |  |  |  |
|      | is   |  |  |  |  |
| (A)  | $y = e^{\frac{x}{y}}$  |  |  |  |  |
| (B)  | $y^2 = e^{\frac{x^2}{y^2}}$  |  |  |  |  |
| (C)  | $y^2 = e^{\frac{x}{y}}$  |  |  |  |  |
| (D)  | $y = e^{\frac{x^2}{y^2}}$  |  |  |  |  |
|      |  |  |  |  |  |
| Q.15 | Which of the following is NOT CORRECT?                                   |  |  |  |  |
| (A)  | Permanent settlement was introduced by Lord Cornwallis in Bengal in 1793 |  |  |  |  |
| (B)  | The First War of Indian Independence occurred in 1857                    |  |  |  |  |
| (C)  | Dadabhai Naoroji prepared the estimate of national income in 1860        |  |  |  |  |
| (D)  | In 1905, Swadeshi Movement was started in India                          |  |  |  |  |
|      |  |  |  |  |  |
|      |  |  |  |  |  |

| Q.16 | In a two-player game, player 1 can choose either M or N as strategies. Player 2 can choose either X, Y, or Z as strategies. The payoff matrix is as follows: |                       |                     |                       |
|------|--|-----------------------|---------------------|-----------------------|
|      |  | Х                     | Y                   | Z                     |
|      | М  | 3,1                   | 0, 0                | -1,2                  |
|      | Ν  | 0,0                   | 1,3                 | 0.5, 1                |
|      | Which set of strategy strategies?  | y profiles survives i | terated elimination | of strictly dominated |
| (A)  | (N, Y)   |                       |                     |                       |
| (B)  | (M, X)   |                       |                     |                       |
| (C)  | (N, Z)   |                       |                     |                       |
| (D)  | (M, Z)   | Y                     |                     |                       |
|      |  | р<br>                 |                     |                       |

| Q.17 | For a profit maximising monopolist, the ratio of the profit margin to price (also<br>known as the Lerner Index or the relative mark-up) has a relationship with the<br>price-elasticity of demand at the profit maximising price. Then, which of the<br>following statements is CORRECT? |  |  |  |  |
|------|--|--|--|--|--|
| (A)  | The larger the elasticity of demand at the profit maximising price, the greater is the relative mark-up  |  |  |  |  |
| (B)  | The power to sustain a price higher than the marginal cost depends only on the profit maximising price   |  |  |  |  |
| (C)  | At the profit maximising price, given costs are greater than zero, the price elasticity of demand is strictly larger than unity  |  |  |  |  |
| (D)  | At the revenue maximising price, the price elasticity of demand is greater than unity  |  |  |  |  |
|      |  |  |  |  |  |

| Q.18   | To study the effect of $X_1$ and $X_2$ on $Y$ , the following regression model is estimate using a large sample:  |                 |                    |           |
|--|---|-----------------|--------------------|-----------|
|  | $Y = \alpha + \beta_1 X_1 + \beta_2 X_2 + \varepsilon$  |                 |                    |           |
| The OLS estimates and standard errors are presented below: |   |                 |                    | low:      |
|  |   | α               | $\beta_1$          | $\beta_2$ |
|  | Estimates   | 2.30            | 0.39               | 1.80      |
|  | Standard errors   | 1.15            | 0.13               | 1.00      |
|  | Given the above infor   | mation, which o | f the following is | CORRECT?  |
| (A)  | $\alpha$ is statistically significant at 1% level, $\beta_1$ is statistically significant at 5% level,<br>and $\beta_2$ is statistically significant at 10% level |                 |                    |           |
| (B)  | $\alpha$ is statistically significant at 1% level, $\beta_1$ is statistically significant at 10% level,<br>and $\beta_2$ is statistically significant at 5% level |                 |                    |           |
| (C)  | $\alpha$ is statistically significant at 5% level, $\beta_1$ is statistically significant at 1% level,<br>and $\beta_2$ is statistically significant at 10% level |                 |                    |           |
| (D)  | $\alpha$ is statistically significant at 5% level, $\beta_1$ is statistically significant at 10% level,<br>and $\beta_2$ is statistically significant at 5% level |                 |                    |           |
|  |   |                 |                    |           |

| Q.19 | Suppose high quality and low quality products are sold at the same price to the buyers. The buyers have less information to determine the quality of the product compared to the sellers at the time of purchase. Which of the following problems arises in this situation?                     |  |  |  |
|------|---|--|--|--|
| (A)  | Moral hazard problem  |  |  |  |
| (B)  | Market signaling problem  |  |  |  |
| (C)  | Principal-agent problem   |  |  |  |
| (D)  | Adverse selection problem   |  |  |  |
|      |   |  |  |  |
| Q.20 | Individuals who were either unemployed or out of labour force but had worked<br>for at least 30 days over the reference year were included in the labour force by<br>the NSSO in its labour force surveys. Under which one of the following<br>classifications does the above procedure appear? |  |  |  |
| (A)  | Usual Principal Status  |  |  |  |
| (B)  | Usual Principal and Subsidiary Status   |  |  |  |
| (C)  | Current Weekly Status   |  |  |  |
| (D)  | Current Daily Status  |  |  |  |
|      |   |  |  |  |

| Q.21 | Let the production function be given by   |
|------|---|
|      | $Y_t = A_t K_t^{\alpha} H_t^{\beta} L_t^{1-\alpha-\beta}$   |
|      | where, at time t, $Y_t$ is output, $A_t$ is level of Total Factor Productivity, $K_t$ is                          |
|      | physical capital, $H_t$ is human capital, and $L_t$ is labour. $\alpha = \frac{1}{5}$ and $\beta = \frac{2}{5}$ . |
|      | If the growth rate of $Y_t$ equals 10 percent, the growth rate of $K_t$ equals 5 percent,                         |
|      | the growth rate of $H_t$ equals 5 percent, and the growth rate of $L_t$ equals 10 percent,                        |
|      | then the growth rate of $A_t$ is  |
| (A)  | 2 percent   |
| (B)  | 3 percent   |
| (C)  | 5 percent   |
| (D)  | 10 percent  |
|      |   |
|      |   |
|      |   |
|      |   |
|      |   |

| 0.22 | Consider an economy where technology is characterised by the production       |
|------|---|
| Q.22 | function:   |
|      | $Y = 50K^{0.4}L^{0.6}$  |
|      | where, $Y$ is output, $K$ is capital, and $L$ is labour.                      |
|      |   |
|      | Assuming perfect competition in the product market and in the factor markets, |
|      | the share of total income paid to labour is equal to                          |
|      |   |
| (A)  | 0.2   |
| (B)  | 0.3   |
| (C)  | 0.4   |
| (D)  | 0.6   |
|      |   |

| Q.23 | In a two-player game, player 1 can choose either U or D as strategies. Player 2 can choose either L or R as strategies. Let c be a real number such that $0 < c < 1$ . If the payoff matrix is |           |                  |                              |     |
|------|--|-----------|------------------|------------------------------|-----|
|      |  |           | L                | R                            |     |
|      |  | U         | 0,0              | 0, —c                        | S   |
|      |  | D         | —с, 0            | 1 – c, 1 – c                 | 0   |
|      | then the numb  | per of pu | re strategy Nasl | h Equilibria in the game equ | als |
| (A)  | 1  |           |                  |                              |     |
| (B)  | 2  |           |                  |                              |     |
| (C)  | 3  |           |                  |                              |     |
| (D)  | 4  |           |                  |                              |     |
|      |  |           |                  |                              |     |

| Q24 | The Rangarajan Panel on 4 <sup>th</sup> June 1993 submitted recommendations related to Balance of Payment (BoP). Which one of the following was NOT a part of the Panel's recommendations? |
|-----|--|
| (A) | Efforts should be made to replace debt flows with equity flows   |
| (B) | The ratio of debt linked to equity should be limited to 1:4  |
| (C) | The minimum targets for foreign reserves should be fixed in such a way that the reserves are generally in a position to accommodate imports of 3 months                                    |
| (D) | No sovereign guarantee should be extended to private sector  |
|     |  |

| Q.25 | According to the "State of Inequality in India Report" from the Institute for Competitiveness, released on 18 <sup>th</sup> May 2022, which of the following statements is CORRECT?     |
|------|---|
| (A)  | In India, the percentage of anaemic children under 5 years of age has decreased from 67.1 percent in 2015-16 to 58.6 percent in 2019-21   |
| (B)  | The female labour force participation rate in India has increased from 49.8 percent in 2017-18 to 53.5 percent in 2019-20   |
| (C)  | Using data from the Periodic Labour Force Survey (PLFS) 2019-20, the report shows that individuals with monthly salary of Rs. 25,000 are among the top 10 percent of total wage earners |
| (D)  | By the end of 2019-20, 95 percent of all schools in India have functional toilets for girls   |
|      |   |

| Q.26 | Consider the production function:   |
|------|---|
|      | $Q(K,L) = \left(2\sqrt{K} + 3\sqrt{L}\right)^2$   |
|      | where $Q$ is the output, $K$ is capital, and $L$ is labour.   |
|      | If $\eta_K$ and $\eta_L$ denote the output elasticities with respect to capital and labour, respectively, then the value of $(\eta_K + \eta_L)$ is  |
| (A)  | 2   |
| (B)  | 1   |
| (C)  | 4   |
| (D)  | 0.5   |
|      |   |
| Q.27 | Consider a short-run Phillips curve with a constant expected rate of inflation. If<br>the aggregate demand decreases unexpectedly and the labour force remains the<br>same, then what will happen to aggregate price and unemployment rate? |
| (A)  | Aggregate price rises and unemployment rate falls   |
| (B)  | Aggregate price falls and unemployment rate rises   |
| (C)  | Aggregate price rises and unemployment rate rises   |
| (D)  | Aggregate price falls and unemployment rate falls   |

| Q.28 | Suppose the price elasticity of demand $(e_D)$ is $-\frac{1}{5}$ and the price elasticity of supply $(e_S)$ is $\frac{2}{5}$ . Then, the incidence of a specific (or unit) tax on the firms |
|------|---|
|      | is equal to   |
| (A)  | $\frac{1}{3}$   |
| (B)  | $\frac{2}{3}$   |
| (C)  | $\frac{1}{2}$   |
| (D)  | $\frac{1}{4}$   |
|      |   |

EN

| Q.29 | The differential equation satisfied by circles with radius 3 and center lying on the <i>Y</i> -axis is |
|------|--|
| (A)  | $\left(\frac{dy}{dx}\right)^2 = \frac{x^2}{9 + x^2}$   |
| (B)  | $\left(\frac{dy}{dx}\right)^2 = \frac{9 + y^2}{y^2}$   |
| (C)  | $\left(\frac{dy}{dx}\right)^2 = \frac{x^2}{9 - x^2}$   |
| (D)  | $\left(\frac{dy}{dx}\right)^2 = \frac{9 - y^2}{y^2}$   |
|      |  |

| Q.30 | Suppose expected inflation rate $(\pi_t^e)$ of an individual is formed as:  |
|------|---|
|      | $\pi_t^e = (1 - \theta) \overline{\pi} + \theta \pi_{t-1}$  |
|      | where, $\overline{\pi}$ is constant inflation rate, $\pi_{t-1}$ is previous year's inflation rate, and $0 \le \theta \le 1$ is weight assigned to inflation rate at different points in time. |
|      | Then, which of the following is NOT CORRECT?  |
| (A)  | If $\theta = 0$ , then the individual assumes a constant inflation rate   |
| (B)  | If $\theta \approx 1$ and $\overline{\pi} < \pi_{t-1}$ , then the individual expects this year's inflation rate to be similar to last year  |
| (C)  | The original Phillips curve is derived under the assumption of $\theta \approx 1$   |
| (D)  | A modified Phillips curve is derived under the assumption of $\theta = 1$   |
|      |   |

| Section B | 3: Q.31 – Q.40 Carry TWO marks each.   |
|-----------|--|
| Q.31      | In the case of a small open economy with fixed exchange rate regime and imperfect capital mobility, which of the following is/are CORRECT?                 |
| (A)       | Fiscal contraction will lead to Balance of Payment deficit in the short-run if the slope of LM curve is greater than the slope of Balance of Payment curve |
| (B)       | Fiscal contraction will lead to Balance of Payment deficit in the short-run if the slope of LM curve is less than the slope of Balance of Payment curve    |
| (C)       | Monetary expansion leads to Balance of Payment surplus in the short-run irrespective of the slopes of the LM curve and the Balance of Payment curve        |
| (D)       | Monetary expansion leads to Balance of Payment deficit in the short-run irrespective of the slopes of the LM curve and the Balance of Payment curve        |
|           |  |
|           |  |

|      | Which of               | the following is/ | /are CORRECT?          |                   | 2                      |
| (A)  | Real GDP               | in the year 201   | 7 (base year = 2016)   | is Rs. 4,250      |                        |
| (B)  | Real GDP               | in the year 2010  | 6 (base year = 2015)   | is Rs. 3,500      |                        |
| (C)  | Nominal (              | GDP in the year   | 2015 is Rs. 6,600      |                   |                        |
| (D)  | Price leve             |                   | y GDP deflator, incre  | eased in 2017 as  | compared to 2016       |
|      |                        |                   |                        |                   |                        |

| Q.35 | Let a random variable X has mean $\mu_x$ and non-zero variance $\sigma_x^2$ , and another random variable Y has mean $\mu_y$ and non-zero variance $\sigma_y^2$ . If the correlation coefficient between X and Y is $\rho$ , then which of the following is/are CORRECT? |
|------|--|
| (A)  | $ \rho  \leq 1$  |
| (B)  | The regression line of Y on X is $y = \mu_y + \frac{\rho \sigma_x}{\sigma_y} (x - \mu_x)$  |
| (C)  | The variance of $X - Y$ is $\sigma_x^2 + \sigma_y^2 - 2\rho\sigma_x\sigma_y$   |
| (D)  | $\rho = 0$ implies X and Y are independent random variables  |
|      |  |

| Q.36 | Let $X_1, X_2,, X_n$ be a random sample of size $n > 1$ drawn from a probability distribution having mean $\mu$ and non-zero variance $\sigma^2$ . Then, which of the following is/are CORRECT? |
|------|---|
| (A)  | The sample mean has standard deviation $\frac{\sigma}{\sqrt{n}}$  |
| (B)  | The probability distribution of $\frac{\sum_{i=1}^{n} (X_i - \mu)}{\sigma \sqrt{n}}$ will tend to follow standard normal distribution as $n \to \infty$   |
| (C)  | $\frac{(n-1) S^2}{\sigma^2}$ will follow $\chi^2$ distribution with $(n-1)$ degrees of freedom, where $S^2$ is the sample variance  |
| (D)  | The sample mean is always a consistent estimator of $\mu$   |
|      |   |

| Q.37  | Let $M = \begin{pmatrix} \alpha & -6 \\ -1 & 1 \end{pmatrix}$ , $\alpha \in R$ be a 2 × 2 matrix. If the eigenvalues of $M$ are $\beta$ and 4, then which of the following is/are CORRECT? |
|-------|--|
| (A)   | $\alpha + \beta = 1$   |
| (B)   | An eigenvector corresponding to $\beta$ is $[2, 1]^T$  |
| (C)   | The rank of the matrix <i>M</i> is 2   |
| (D)   | The matrix $M^2 + M$ is invertible   |
|       |  |
| Q. 38 | Let $f : R^2 \to R$ be a function defined as<br>$f(x, y) = \begin{cases} \frac{x^2 y}{x^4 + y^2}, & \text{if } (x, y) \neq (0, 0), \\ 0, & \text{if } (x, y) = (0, 0). \end{cases}$        |
|       | Then, which of the following is/are CORRECT?   |
| (A)   | $\lim_{(x,y)\to(0,0)} f(x,y) = 0$  |
| (B)   | $f_x(0,0) = 0$   |
| (C)   | f(x, y) is not continuous at $(0, 0)$  |
| (D)   | Both $f_x$ and $f_y$ do not exist at (0,0)   |

| Q.39 | Which of the following is/are NOT CORRECT?   |
|------|--|
| (A)  | Under the Reserve Bank of India Act, 1938, every scheduled bank has to keep certain minimum cash reserves with the RBI |
| (B)  | CRR is the statutory reserve requirements to be kept by every scheduled bank with the RBI                              |
| (C)  | A higher SLR increases the capacity of commercial banks to grant loans and advances                                    |
| (D)  | A high SLR can be considered as a tax on the banking system  |
|      |  |

| Q.40 | According to the NITI Aayog's "National Multidimensional Poverty Index: A Progress Review 2023", which of the following is/are CORRECT?                       |
|------|---|
| (A)  | The rural areas in India have experienced fastest decline in percentage of multidimensional poverty from 35.59 percent in 2015-16 to 21.28 percent in 2019-21 |
| (B)  | The incidence of poverty in urban areas in India increased from 5.27 percent in 2015-16 to 8.65 percent in 2019-21  |
| (C)  | A decline in India's Multidimensional Poverty Index in 2019-21 is due to improvement in all the 12 indicators   |
| (D)  | At the national level, there is a decline in the intensity of poverty between 2015-16 and 2019-21   |
|      |   |

| Section ( | C: Q.51 – Q.60 Carry TWO marks each.   |
|-----------|--|
| Q.51      | An individual owns a mobile phone, currently valued at Rs. 40,000. The current wealth of the individual is Rs. 2,00,000 (including the value of the mobile phone). According to reports, there is a 20 percent chance of mobile phone theft and an actuarially fair insurance policy is available to insure the loss of the mobile phone against a theft. The individual's von-Neumann-Morgenstern utility of wealth function is given by $U(W) = \sqrt{W}$ , where W is the wealth. Then, the maximum willingness to pay for such an actuarially fair insurance policy is Rs. <i>(rounded off to nearest integer)</i> . |
| Q.52      | Consider the following AK model where the production function is given by  |
|           | Y = AK<br>where Y is output, K is capital, and A is a constant that reflects the level of<br>technology. Suppose there is zero technological progress in the economy and<br>A = 0.50. In the economy, the savings rate equals 0.60 and the depreciation rate<br>for the capital stock equals 0.05. The population growth rate equals zero and the<br>size of the labour force is normalised to 1. Based on the AK model, the steady<br>state growth rate of output per capita in the economy equals percent<br>( <i>in integer</i> ).  |

| Q.53 | A regression eq                  | uation Y  | = -2.5 +    | 2X is esti                   | mated usi       | ng the follow      | wing data:      |  |  |  |
|------|----------------------------------|---|-------------|------------------------------|-----------------|--------------------|-----------------|--|--|--|
|      |                                  | Y   | 2           | 5                            | 9               | 14                 |                 |  |  |  |

| Q.54 | A consumer's u                   |   |             | ven by:<br>$2x_1 - 1)^{0.2}$ | $x^{25}(x_2-4)$ | $)^{0.75}$         |                 |  |  |  |
|      | If the consumer                  | has a buc   | dget of 73  | and the u                    | nit prices      | of $x_1$ and $x_2$ | are given by    |  |  |  |
|      | 2 and 1, respect                 | tively, the   | en the valu | e of $(x_1 +$                | $(x_2)$ is      |                    | (rounded off    |  |  |  |
|      | to two decimal                   | places).  |             |                              |                 |                    |                 |  |  |  |
|      |                                  |   |             |                              |                 |                    |                 |  |  |  |
|      |                                  |   |             |                              |                 |                    |                 |  |  |  |
| Q.55 | An industry ha                   | s 6 firms   | in Courne   | ot competi                   | ition. Eac      | h of the 6 f       | irms has zero   |  |  |  |
|      | fixed costs, and                 | a constan   | nt margina  | l cost equa                  | l to 20. Tl     | ne product is      | s homogenous    |  |  |  |
|      | and the industry                 | y inverse   | demand fi   | unction is                   | given by        | P = 230 -          | Q, where $P$ is |  |  |  |
|      | the market pric                  | e and O   | is the indu | 4                            | ut (sum o       | f outputs of       | the 6 firms)    |  |  |  |
|      | -                                | e una q   | is the max  | istry outp                   | at (Sulli O     | r ourpuis or       | the o mins).    |  |  |  |

| Q.56 | Let the value of a random sample drawn from a normal distribution with mean 5           |
|------|---|
|      | and unknown standard deviation $\sigma$ be 4.8, 4.5, 5.1, 5.2, 5.3, 5.5. Then, the      |
|      | maximum likelihood estimate of $\sigma^2$ is (rounded off to two decimal                |
|      | places).  |
|      |   |
|      |   |
| Q.57 | An economy produces a consumption good and also has a research sector which             |
|      | produces new ideas. Time is discrete and indexed by $t = 0, 1, 2,$                      |
|      | The production function for the consumption good is given by                            |
|      | $Y_t = A_t L_{yt}$  |
|      | where, at time $t, Y_t$ is the amount of consumption good produced, $A_t$ is the stock  |
|      | of existing knowledge, and $L_{yt}$ is the amount of labour devoted to production of    |
|      | consumption good. It is known that $A_0 = 1$ .  |
|      | The and heating for a for a new ideas is since by                                       |
|      | The production function for new ideas is given by                                       |
|      | $A_{t+1} - A_t = \frac{1}{250} A_t L_{at}$  |
|      | where $L_{at}$ is the amount of labour devoted to production of new ideas at time $t$ . |
|      | Suppose that for all t, $L_{at} = 10$ and $L_{yt} = 90$ . Then, the growth rate of the  |
|      | consumption good $(Y_t)$ at $t = 50$ is percent ( <i>in integer</i> ).                  |
|      |   |

| Q.58 | Consider a closed economy IS-LM model. The goods and the money market             |
|------|---|
|      | equations are respectively given as follows:                                      |
|      | $Y = 90 + 0.8Y_d - 100i + G$  |
|      | $M_s = 750 + 0.2Y - 260i$   |
|      | where, $Y =$ national income; $Y_d =$ disposable income; $T =$ total tax given by |
|      | T = 5 + 0.2Y; $i =$ interest rate; $G =$ government expenditure = 300;            |
|      | $M_s = \text{constant money supply} = 950.$                                       |
|      | The value of T at equilibrium Y is (rounded off to the nearest                    |
|      | integer).   |
|      |   |
|      |   |
| Q.59 | The supply curve is given as $p = 10 + x + 0.1x^2$ , where p is the market price  |
|      | and $x$ is the quantity of goods supplied. The change in the producer surplus due |
|      | to an increase in market price from 30 to 70 is (rounded off to nearest           |
|      | integer).   |
|      | integer).   |
|      | 7   |
|      |   |
|      |   |
|      |   |
|      |   |
|      |   |
|      |   |

| Q.60 | There are two goods $X$ and $Y$ and there are two consumers $A$ and $B$ in a pure exchange economy. $A$ and $B$ have Cobb-Douglas utility functions of the form      |
|------|--|
|      | $U_A = 2X^{0.4}Y^{0.6}$ and $U_B = X^{0.3}Y^{0.7}$ , respectively. Initially, A is endowed with 50   |
|      | units of good X and 20 units of good Y. Similarly, B is endowed with 50 units of good X and 20 units of good Y. If the unit price of good Y is normalised to 1, then |
|      | the equilibrium unit price for good X is (rounded off to two decimal   |
|      | places).   |
